

1 Any PA System

2 IC-2 Interpreter Console

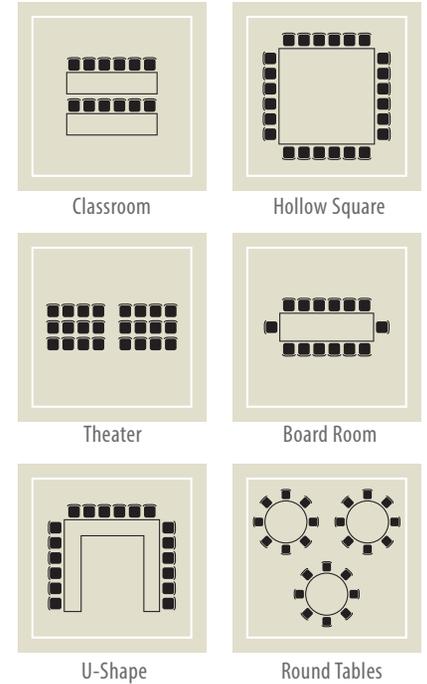

3 T45 Transmitter

4 Receivers & Headsets

The system is compatible for use with any of these layouts

SETS UP IN ONLY 5 MINUTES!!

ProT800 Interpretation System is designed to work as follows:

- 1** ProT800 can easily connect to any sound system using one standard XLR audio cable.
- 2** Output from Sound System connects to IC-2 "Floor In" using XLR connection cable and feeds all sound to IC-2 console. Interpreters connect their headset microphones to IC-2 console and use independent volume and tone control for excellent monitoring of presenter's voice so they may hear better, concentrate better and this ultimately means your interpreters can now do a better job of interpreting.
- 3** T45 Transmitter is connected from IC-2 "Channel 1" output so interpreter's voices may be transmitted wirelessly. XLR connection cable can be run over 500m to place transmitters in any location in venue.
- 4** Each person uses a Receiver with headset so each participant may listen to the language of their preference. You may add up to 5,000 receivers to any system.
- 5** System may be configured for up to eight (8) languages by adding two (2) headset microphones, one IC-2 and one (1) T45 Transmitter per language. In a multi-language configuration, the floor signal is shared and Relay interpretation is accomplished by daisy-chaining IC-2s with CAT5 cables.
- A** Floor language may be transmitted by simply adding a transmitter to first IC-2 "Channel 2" output. (e.g., Dual-language configuration Eng to/from Spanish)

Bigger, Better, Lighter
